Saurav Kendre

Senior UI/UX Designer | Design Systems, Research, Accessibility, Mentorship

Mumbai, India | +91 9673318441 | sauravsunilkendre@gmail.com

Portfolio: kendyux.online | LinkedIn: linkedin.com/in/sauravkendre

SUMMARY

Senior designer with 5+ years across B2B SaaS, consumer products, and client work, including a lead role on a shipped enterprise platform and a management role running design across multiple product teams. Builds and maintains design systems with documented tokens, components, and interaction patterns, and has taken one through adoption across several products. Runs research directly, from interviews and usability testing to accessibility review, with formal training in qualitative research methods at IIT Bombay. Has mentored junior designers, run critique as a standing ritual, and defended design decisions to product, engineering, and business stakeholders. Works with Claude, Claude Code, and Cursor daily, and reads frontend code rather than handing over screens and hoping.

CORE STRENGTHS

Design Systems: built from nothing and maintained in production, documented tokens, components, variants and states, interaction patterns, and adoption across multiple products and teams

Research: user interviews, contextual inquiry, usability testing, UAT with real users, synthesis and presenting findings to stakeholders, formal training in contextual inquiry (research) at IIT Bombay

Accessibility: WCAG-aligned colour contrast, typography, focus and keyboard behaviour, and state communication, built into design system components rather than retrofitted at the end

Mentorship and Craft Leadership: mentored and reviewed junior designers, established recurring design review and critique, raised consistency across teams by example rather than mandate

Figma: components, variants, variables and token workflows, advanced prototyping, Dev Mode and developer handoff, shared libraries

Interaction and Visual Design: user flows, information architecture, wireframes, prototypes, high-fidelity UI, typography, layout systems, iconography, responsive design across web, mobile, and desktop

Working with Engineering: tokens and component behaviour agreed with frontend, design QA against built screens, pre-release UAT, HTML and CSS, reads frontend code in Cursor

AI in Everyday Work: Claude and Claude Code for UX writing, documentation, ideation, design system maintainance and prototyping, Cursor for reading and generating frontend code, AI-assisted visual QA, with review of output before it reaches users

EXPERIENCE

Lead Product Designer | May 2025 - Present

LogiNext Solutions, Mumbai, India (Enterprise Logistics SaaS)

- Lead designer across the full product portfolio, owning end-to-end design from discovery and research through flows, high-fidelity UI, developer handoff, and review of what shipped.
- Built the product design system from scratch and maintains it in production: documented tokens, components, variants and states, adaptive patterns, and conversational UI patterns for AI surfaces, with accessibility built into the components themselves.
- Designed the Control Tower, an operations dashboard where dispatchers monitor and intervene in live shipment activity, turning dense status and exception data into views people can scan and act on under time pressure. • Designed the logistics invoicing product end to end, covering invoices, credit and debit notes, taxation, e-way bills, and e-invoicing with IRN generation, a compliance-heavy domain with document states, amendment paths, and failure cases that all had to be designed for.
- Runs research directly with operations staff and dispatchers, mapping real workflows through interviews and observation before design begins, then validating through usability testing and pre-release UAT. Works with frontend engineers on token usage and component behaviour, and reviews built screens against design intent before release.
- Shipped work with measurable outcomes: 67 percent adoption lift on a redesigned workflow, SLA adherence from 73 to 88 percent, and idle delivery associates from 21 to 13 percent.

- Uses AI tooling across ideation, prototyping, front end code generation, and visual QA, cutting design process time by 70 percent, which is what makes a one-designer portfolio viable.

Deputy UX/UI Design Manager | April 2022 - May 2025
Jio Platforms Limited, Mumbai, India

- Led design across multiple product teams at national scale, covering B2C and B2B products on mobile, web, and desktop, including Tira Beauty, JioPC and JioStream Studio.
- Mentored and reviewed the work of junior designers, giving structured feedback on craft and rationale, and raising the standard of what the team shipped.
- Established a recurring design review and critique process that held visual, brand, and accessibility consistency across teams as the group grew.
- Created and maintained design systems and style guides used across several products, keeping component libraries coherent while requirements and teams changed.
- Ran design across an unusually wide range of domains including e-commerce, ad tech, dashboards and data visualisation, communication apps, AI, and OS design, and presented design rationale to product and business stakeholders throughout. • Improved design process efficiency by 15 percent through structured workflows and AI copilot tooling.

UX/UI and Visual Designer | April 2021 - April 2022
Impact App (Health Technology)

- Design support the product: user flows, wireframes, prototypes, and the full visual layer.
- Simplified flows for an audience with no technical background, using usability feedback to cut steps.

Creative Designer | January 2019 - April 2021
Horizon Branding (Client Services)

- Led design across concurrent client projects, taking each from brief through concept, review, and final delivery, and presenting work directly to clients.
- Covered identity, typography, colour, iconography, and layout systems, which is the craft foundation the product work still runs on.

RESEARCH AND TRAINING

Coursework in interview technique, contextual inquiry, coding, and interpretation. Currently running an independent contextual inquiry study on how people buy vegetables from local vendors versus quick commerce, covering recruitment, interviews, transcription, and interpretation.

HANDS-ON WITH AI AND CODE

Builds and ships personal web apps end to end with Claude Code and Cursor, including a pantry management system on Supabase, a medicine reminder with auto-generated dose schedules, an expense tracker built from statement data, and a project tracking tool. Also developed a design personality specification system for briefing AI agents, so generated UI holds a consistent point of view across surfaces instead of drifting between screens.

EDUCATION

Executive Post Graduate Diploma, Interaction Design (in progress)
IDC School of Design, Indian Institute of Technology Bombay
Human Factors and Interaction Design (HFID) Credential
IDC School of Design, Indian Institute of Technology Bombay | Verify credential
B.Tech, Computer Engineering with Human Computer Interaction | August 2017 - August 2021
Vishwakarma Institute of Technology, Pune
